Terracore

Terracore – a comprehensive range of core drilling tools for reliable site investigation

Epiroc is among the world's leading manufacturers of core drilling equipment. We have supplied our market with high performance products during many generations. Our aim has always been clear – to develop safe and environmentally friendly products with sustainable productivity. The Terracore drilling system is a result from this effort.

The market's most diverse and comprehensive range

Terracore range covers a complete package of in-the-hole equipment. Conventional and wire line core barrels, drill rods and casings, core boxes, additives, adapters and fishing tools, not to mention a wide range of drilling bits to make core drilling reliable and fast.

A multitude of applications

Terracore can be used in a wide range of applications – as long as the ground and depth correspond to the product design.

Here are just a few examples; carrying out site investigation in urban

construction sites, exploration in surface and underground mines, drilling grout holes in tunnels and on hydro-electric power projects.

Core drilling for undisturbed sampling and hole making is often a preferred solution for straight holes and where noise and vibrations are subject to legislation.

Terracore is ideal for traditional exploration in soft and shallow formations (100-150m) and large wireline core drilling applications.

Epiroc solutions

Epiroc offers a total solution with the rigs and the consumables. Epiroc surface and underground range

rigs can utilize the B, T2, T6 and S-Geobor core trilling systems, for different applications.tube system for straight deep grouting holes.

Get the best from your drilling equipment

Epiroc is a global company with Customer Centers in more than 150 countries. Our dedicated sales engineers are always on hand to discuss and solve your drilling problems. We offer service support, spare parts and consumables packages for sustainable productivity. And with our rigorously field tested products, you can be assured of the market's best geotechnical sampling and drilling equipment.

How to select Terracore products

Introduction

In this catalogue you will mainly find In-The-Hole tools (ITH) and bits suitable for geotechnical core sampling in soft unconsolidated to medium hard consolidated formations.

ITH for mineral exploration in deep hard formations can be found in the separate Exploration catalogue (9866 0067 01).

Detailed parts information can be found in the respective product section. Select core barrel, drill rods, casing and sockets, accessories and diamond products to match the application from respective sub section.

The hole/core diameter chart (see dimension guide on page 8) will al-

low you to quickly reference what sizes are available in a given system.

Each product section will start with basic application information with technical data and some helpful hints for proper product selection. The last page of each section will provide a summary of the spare part kits and options for the systems.

STEP 1

Systems

Epiroc offers a full range of core barrels for geotechnical core sampling. Your first choice of core barrel depends on whether you use a conventional or wire line core barrel system.

STEP 2

Core barrels

Conventional

Conventional core barrels produce a larger core diameter compared to equivalent wire line size. The rugged construction and design features ensure optimization of productivity in applications where the use of wire line system is not practical or cost effective. Conventional core barrels are typically used in shorter bore holes. The core barrels can drill in all directions.

The T2 double tube conventional core barrel is a thin-wall all round core barrel for most type of homogeneous or somewhat broken formations where water flush can be used.

How to select your system

Determine if the application requires conventional or wireline system.

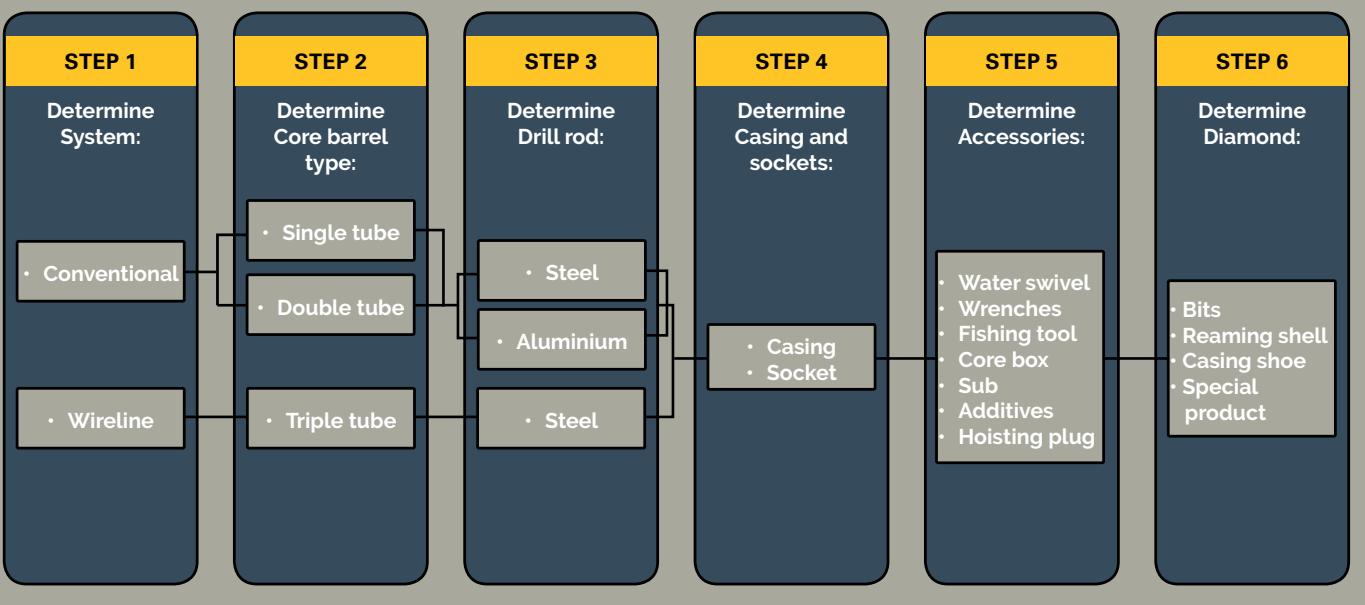

Determine what tube design the application requires. If double tube design is preferred, then choose if thin wall or standard wall is needed.

Determine drill rod based on the preferred core barrel design and connection thread in core barrel head. For wireline only one size of rods suitable for the selected core barrel design can be selected.

Determine suitable casing and socket if required for the drilling operation.

Determine accessories that you require to complement the ITH equipment to perform a trouble free and cost effective drilling operation.

Finally determine your drill bit by guidelines through the Terracore classification chart.

The thin wall design offer features

The T2 double tube conventional core barrel is a thin-wall all round core barrel for most type of homogeneous or somewhat broken formations where water flush can be used. The thin wall design offer features as:

- Faster penetration
- Lower diamond cost
- Larger core

Epiroc's T2 core barrels are available in metric hole sizes 46 to 101 mm.

The T6 double tube conventional system is a standard wall all round core barrel for core sampling in all formations. Despite the relatively thin wall, T6 can very well be used with high viscous mud or in special cases with air flushing. T6 core barrels are manufactured in metric sizes 76 to 146 mm (S-size).

The B single tube conventional system is suitable for drilling straight holes e.g. grouting holes for dam constructions. Typical situations are when core examination is of less importance or when concrete core extraction is required. The B system is based upon the metric casing and can be extended one length or more by adding suitable length of casing rods. B core barrels are manufactured in metric sizes 46 to 146 mm. Wire line rods B, N, H can easily be converted to single tube core barrels. See page 101, "Special bit tools".

Wireline

The S Geobor wire line core drilling system from Epiroc has been specially developed for core drilling and undisturbed sampling in soft formations. The core barrel is of "triple tube design" type consisting of an outer tube and an inner tube with liner.

There is a plastic "liner" in the inner tube which considerably reduces friction between the core and the inner tube. This means that a maximum core recovery is guaranteed. The plastic tube can also be used as a core container when provided with plugs at both ends. Split liners in steel are also available as alternatives to our standard solid round plastic liners – see page 64 for optional 'End caps'.

Geobor core barrels are manufactured in one dimension S (146mm) only.

The core barrel is designed for flushing with water, mud and in special cases with air. Geobor core barrels can easily be adapted to fit all ground and rock conditions with different types of bits and conversion kits.

With the available options, the Geobor core barrel is the most versatile in its field.

STEP 3

Drill rods

Epiroc drill rods and casings are designed to deliver top performance to your equipment and your drill site.

Conventional drill rods

Conventional drill rods are available in light-weight steel or aluminium, providing you an ergonomic flexibility which will improve your handling capabilities under the most strenuous conditions. Steel drill rods are manufactured with friction welded hardened steel coupling. Aluminium drill rods are manufactured with glued, threaded hardened steel couplings. For conventional core barrels the rod OD size is recommended to be as large as possible. However it must not restrict the annulus circulation flow. You also have to consider machine capacity.

Note! If chosen drill rods does not match the corresponding core barrel's connection threads you have to choose cross-over subs.

You have to consider the rod length to fit the overall length that can be handled efficiently. It is recommended to select a few smaller rods to compensate the drill string length even though the main part of selected rods are longer. We recommend conical thread double WJ design for easier jointing and safer sealing.

Wire line drill rods

Wire line drill rods are manufactured from highest available carbon seamless steel tubes for superior yield capacity and ultimate strength. Wire line rods are always flush jointed to

allow inner tube and other tools to pass through. Pin threads are surface treated, for easy jointing and extended life.

In this catalogue we only have two types of wire line rods, PG rods for PG wire line and SG rods for Geobor wire line.

STEP 4

Casing and sockets

Casings are flush jointed and manufactured in standard steel quality. The physical properties are:

- Lower yield point 550 N/mm²
- Tensile strength 690 N/mm²
- Elongation A5 min 15 %

In this catalogue you find metric casing 44–143 mm and imperial casing PW and SGW (SW). For all conventional core barrels up to 131 mm you select casing from the metric casing range.

For S Geobor, you select casing from the imperial casing range. In the casing section you will also find casing sockets to fit corresponding drill rods connections.

Casing shoes are selected from the Terracore bit section Step 6.

STEP 5

Accessories

Details often make the difference in quality of the drilling operation. In this section, we offer products selected for their quality and technical superiority. It is important to use recommended wrenches, to avoid risk of equipment damage.

Note! Wrenches always used in pairs.

Don't forget trouble shooting tools, (recovery taps etc), which might save you some problems.

This sections also include a selection of subs, core boxes, additives and water swivels.

Water swivels should be selected in accordance with type of drill rig used and fluid demands for the application.

STEP 6

Diamond products

Bit selection for impregnated bits is guided by the Terracore classification chart. The rock formation characteristics with corresponding samples of rock types are organized in application rock groups 1-10.

Choose suitable bit based on application number that matches your formation characteristics. Basically the scale indicates a harder formation for a higher number. In application range 1-4, diamond surface set, PDC and TC should be considered as well.

Core barrels type B, T2, T6, S Geobor

Core barrels

Epiroc T2 core barrels are of thin-wall core barrel system for most types of homogenous or somewhat broken formations where water flush can be used.

Conventional double tube core barrel type T6

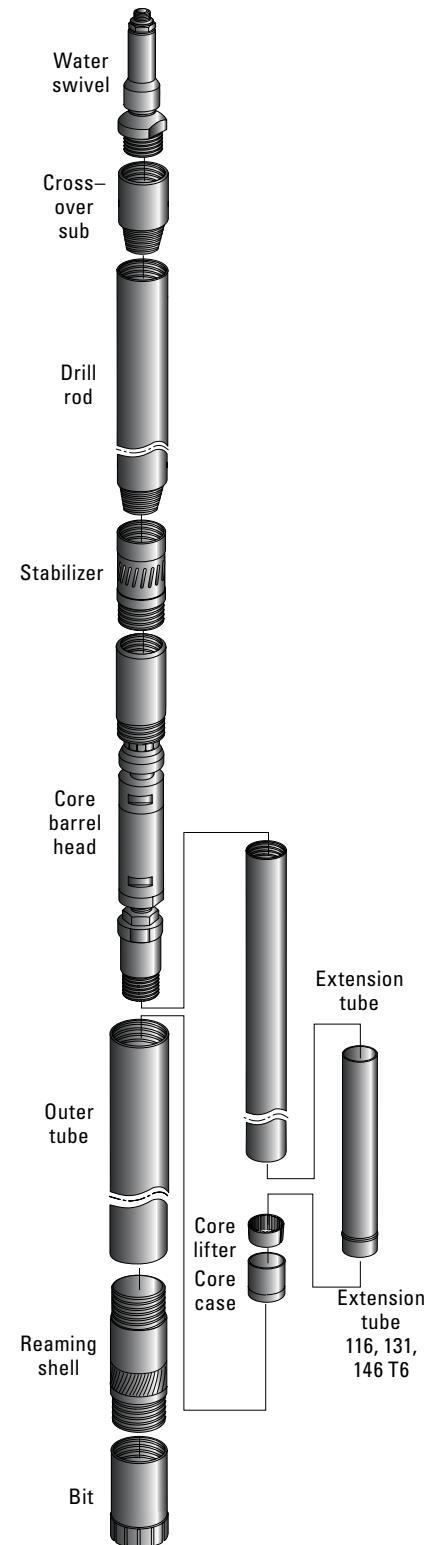

Conventional mud core barrel

The sturdy core barrels type T6 are of allround application for core sampling in all formations. Despite the relatively thin wall, T6 can very well be used with mud or air flushing. For air flushing oversize bits and core barrel couplings are recommended. T6 core barrels are available in metric sizes 76 to 146 mm.

Size	Metric system (mm)				
	Hole diameter	Core diameter	Core barrel connection box	Rec. drill rod	Outer diam. drill rod
76 T6	76,3	57,0	CR50	NWJ	70.0
86 T6	86,3	67,0	CR50	NWJ	70.0
101 T6	101,3	79,0	NW/2 3/8"	NWJ	70.0
116 T6	116,3	93,0	NW/2 3/8"	NWJ	70.0
131 T6	131,3	108,0	NW/2 3/8"	NWJ	70.0/89.0
146 T6	146,3	123,0	NW/2 3/8"	NWJ	70.0/89.0
Imperial system (in)					
76 T6	3.00	2.24	CR50	NWJ	2.76
86 T6	3.40	2.64	CR50	NWJ	2.76
101 T6	3.99	3.11	NW/2 3/8"	NWJ	2.76
116 T6	4.58	3.66	NW/2 3/8"	NWJ	2.76

Conventional single tube core barrel type B

Extendable core barrel

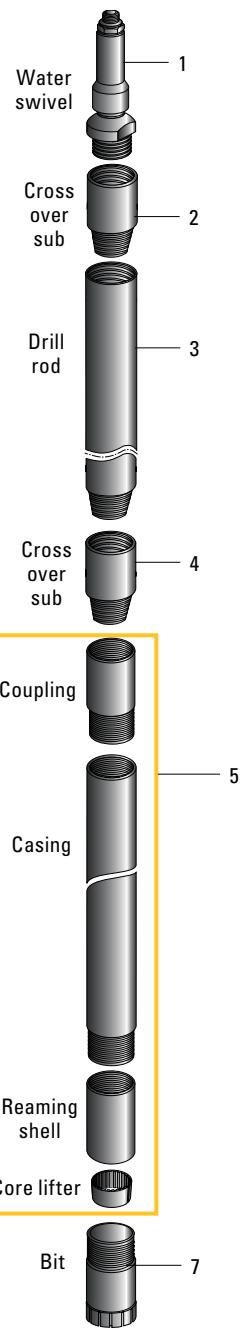

B-single tube is suitable for drilling straight holes e.g. grout hole drilling or for concrete drilling when core examination is of less importance. The system is built upon metric casings and extendable by adding additional casing pipes.

Size	Description			
	Hole diameter mm (in)	Core diameter mm (in)	Core tube outer diameter mm (in)	Core barrel connection box
46 B	46,3 (1.82)	31,7 (1.25)	44,4 (1.75)	CR42
56 B	56,3 (2.22)	41,7 (1.64)	54,4 (2.14)	CR50
66 B	66,3 (2.61)	51,7 (2.04)	64,4 (2.54)	CR50
76 B	76,3 (3.00)	61,7 (2.43)	74,4 (2.93)	NWJ
86 B	86,3 (3.40)	71,7 (2.82)	84,4 (3.33)	NWJ

Wireline triple tube core barrel, S Geobor

S Geobore (146–150 mm)

Epiroc S Geobor wireline is a core barrel system intended for core drilling and sampling in soft formations.

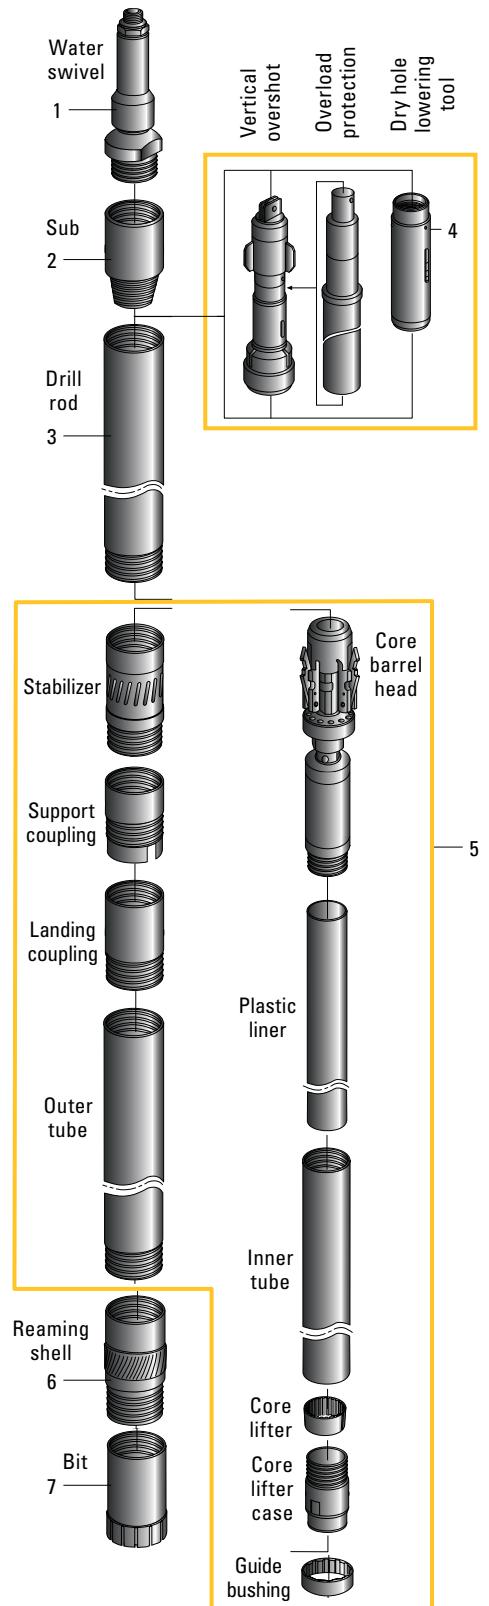

Size	Description			
	Hole diameter method 1,5–6 mm (in)	Hole diameter method 2–3 mm (in)	Core diameter mm (in)	Outer diameter drill rod
Geobor S	146,5 (5.76)	150,0 (5.90)	102,0 (4.02)	139,7 (5.58)

Drilling parameters, see Operators manual (PMI 9866 0236 01)

S Geobor

Drill rods

Application information

Epiroc drill rods are manufactured from the highest quality materials and designed to give trouble free performance under the most demanding drilling conditions.

They are available in metric and imperial standard sizes.

Steel drill rods are manufactured with friction welded couplings.

The couplings have a higher material quality than the mid body. The result is a lighter rod with higher depth capacity and wear resistance.

Aluminium drill rods weigh only about half as much as a steel rod of the same dimension but is equal in strength, due to exceptionally high quality of the aluminium.

The couplings are of high tensile strength steel, threaded and glued on the aluminium rods.

The proper selection of drill rods primarily depends on drill rig type, core barrel design and physical space limitations.

Epiroc casings are manufactured of high standard casing steel quality to suit the most demanding of overburden drilling requirements. They are all of flush joint type, i.e. no separate couplings.

Bundle packaging

Epiroc rods and casings are packed in hexagonal bundles with self-supporting end caps in steel in order to improve handling and provide better protection during transport and storage. Each bundle include quantities as shown in the table to the right.

Type of rod/casing	Number of rods per bundle
AWJ, 43	37
BWJ, 53 casing	24
NWJ casing	19
PG casing	10
SG, PW casing	10
SGW casing	4

Casing tubes and sockets

Information

Metric casing tubes are thinner than imperial casing tubes, but offer instead several additional dimensions within the diameter range. Metric casing is named by outer and inner diameter while an imperial casing is named by inner diameter.

Specifications – metric casings and sockets

Accessories

Application information

Accessories play a vital role in drilling and are to be chosen to match the application and to provide a cost efficient and trouble free drilling operation.

The water swivels presented on the following pages, WS 18/0 and WS 25/0 are not equipped with lifting bails and are best suited for automatic rod handling systems, similar to that of the Diamec rigs. If instead using a drilling rig equipped with a rod handling main hoist, you need

to select a water swivel with a bail which can be found in the In-The-Hole core drilling tools product catalogue for Exploration products (9866 0067 01).

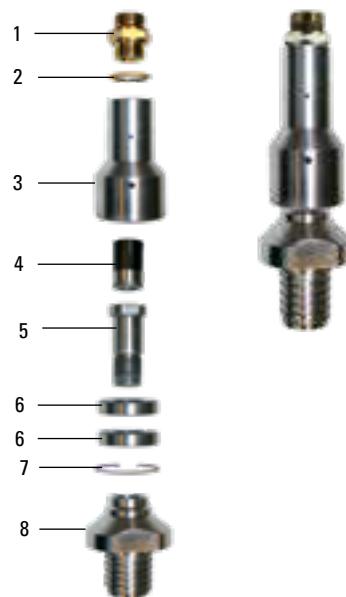

Make sure that subs and sockets for drill rods, core barrels, casings, recovery taps and other threaded connections are selected to properly mate together. Proper handling and use of threaded drilling tools require selection of appropriate wrenches for making and breaking joints.

In this section you will find other accessories to improve quality of core sampling such as additives, thread grease, core boxes, fishing tools etc.

Spare parts list – water swivel WS 18/0

Item	Description	Qty	Product No.
1–8	Water swivel complete, conn. CR42 pin (Inner diameter 18 mm, no bail)	1	8070 0107 42
1	Nipple	1	3715 2545 00

7	Circlip	1	0335 2143 00
Service instructions			
The water swivel is fitted with cemented carbide flat seals to ensure longer service life and effective sealing. Adjustment of the seals is not necessary. The ball bearings are sealed and embedded in grease, thus they do not require lubricating.			
Replacement of bearing and seals:		NB: The parts are left-hand threaded	
1. Remove the circlip (7) then remove the bearing housing (3)		3. The ball bearings (6) can now be removed	
2. Unthread the rotary sleeve (5) from the coupling (8).		4. Remove the nipple (1). The seal (2) can now be removed by pressing it out with a screwdriver.

Rod wrenches

Information

The design of this wrench allows jointing and breaking of thin wall bits, core barrels and casing without risk for damage. The wrenches should be used in pairs.

Clay control and anti-swelling

Claystab liquid

Epiroc Claystab is a liquid anionic polymer viscosifier with high molecular weight providing rapid viscosity without the problems associated with mixing, as is the case with most powdered polymers.

Application

Epiroc Claystab can be used in diamond drilling or well drilling:

- Produces rapid viscosity.
- Very cost effective – low concentration required.
- Reduces rod chatter and torque – increases core recovery.
- Inhibits water.

Advantages

The polymer can be easily and economically broken down for the development of water wells after setting screens.

- Controls sticky clays and inhibits water sensitive, swelling formations.
- Promotes effective settling of drilling solids in surface pits.
- Cost effective and economical to transport.

Several factors will dictate the most appropriate concentration rate.
Please contact your nearest Epiroc representative for optimum results.

Recommended treatment for water well drilling

Add 1,0–1,5 l/m³ for complete water well drilling fluid.

Recommended treatment for diamond core drilling

Add 0,75–1,25 l/m³ water for complete drilling fluid. Add 0,5–0,75 l/m³ to stop rod vibration and reduce torque.

Epiroc Claystab Liquid

Supermix Powder

Fluid loss control agent

Epiroc Supermix Powder is a new generation highly dispersive high quality polyanionic cellulose polymer used for viscosity and water loss control in most water based drilling fluid systems. Supermix Powder will not fisheye and has been designed to disperse rapidly into any make up water even under the poorest conditions. The mixing efficiencies of Supermix Powder reduces wastage and promotes lower mud costs and total hole costs.

Application

Epiroc Supermix Powder forms a protective colloid which inhibits the hydration of water sensitive formations; it has applications in most drilling mediums and has the ability to improve core recovery in diamond drilling, can be added to enhance a bentonite base system and is compatible with most polymers and lubricants. Addition rates can be adjusted to suit specific applications, hardness must not exceed 400 mg/l of calcium.

Recommended treatment

Application	kg/1000 l
To reduce torque and improve core recovery	1,0–3,0
To provide encapsulation and stabilise clays and shales	2,0–5,0
To improve filter cake	1,5–2,5
To improve the properties of a bentonite base drilling fluid	0,5–2,5

Epiroc Supermix Powder can be slowly introduced into mechanical agitation, through water discharge or through a mud hopper.

Advantages

- Very economical, 100 percent active.
- Eliminates wastage, "no fish eyes".
- Easily mixed into low shear environments.
- Effective in fresh, hard and saline environments.
- Promotes thin slick robust filter cake.
- Controls fluid loss without significantly increasing fluid viscosity.
- Supports hole stability in reactive clays and shales.
- Compatible with all water based

drilling fluid systems polymers and lubricants.

- Supplements the properties of a bentonite base drilling fluid.
- Improves core recovery and penetration rates.
- Reduces friction and frequency of differential sticking.
- Non-polluting and environmentally friendly.

Physical properties

- Appearance: White free flowing powder.

- pH (0,2 % solution): 8,5–9,5.

Several factors will dictate the most appropriate concentration rate. Please contact your nearest Epiroc representative for optimum results.

Epiroc Supermix Powder

Supermix Liquid

Fluid loss control agent

Epiroc Supermix Liquid is a high quality polyanionic cellulose polymer suspended in a non-toxic ultra clean mineral oil. Epiroc Supermix Liquid is an extremely effective viscosifier and filtration control agent for use in fresh, saline and hard water. The product is an effective borehole stabiliser, providing lubricating qualities to the mud system.

Application

Epiroc Supermix Liquid can be used in any type of water-based drilling fluid and is tolerant to fresh, hard and saturated salt water environments. Epiroc Supermix Liquid can also be added to Bentonite to complement its properties, used as a simple single polymer system and is compatible with all other products. Epiroc Supermix Liquid is an excellent viscosifier, controls fluid loss and helps produce a thin flexible filter cake. When used correctly, Epiroc Supermix Liquid can inhibit the reactive nature of hydro-sensitive clays and shales, it will also improve core recovery and reduce friction drag in most drilling applications.

Recommended treatment

Concentrations will vary depending on the level and type of losses but will typically range between 6–12 lb / barrel (17–34 kg/m³).

Application	l/m ³
To improve properties of a bentonite mud	2,5–5,0
To reduce torques and improve core recovery	5,0–12,5
To improve fluid loss inhibition and encapsulation	5,0–15,0
When used in salt systems	7,5–17,5

Epiroc Supermix Liquid should be slowly introduced into mechanical agitation, through a water discharge jet or through a mud hopper.

Advantages

- Very cost effective.
- Reduces wastage.
- Can be used as a single sack system.
- Easily mixed under low shear.
- Improves hole stability.
- Inhibits water sensitive formations.
- Lowers filtration rates.
- Reduces rod vibration and imparts lubricating qualities.
- Improves penetration rates.
- Effective in fresh, hard and saline waters.
- Compatible with most water-based products.

Epiroc Supermix Liquid

Physical properties

- Appearance: White viscous slurry.
- pH (1 % solution): 6,5–8,5.
- Specific gravity (water=1): 0,9–1,0.

Several factors will dictate the most appropriate concentration rate.

Please contact your nearest Epiroc representative for optimum results.

Superdrill Liquid

Friction reducer and cutting oil

Epiroc Superdrill Liquid is a distinctive, next generation, high performance extreme pressure lubricant utilising sophisticated technologies to improve the lubricating qualities of a drilling fluid through advanced adhesion and filming characteristics.

Description

Superdrill is a high performance torque reducer formulated in an aqueous solution specially designed to provide friction reduction through enhanced lubricating characteristics of most water-based drilling fluid systems.

Superdrill is based on environmentally acceptable, safe and proven technology and has proven to be highly effective in reducing rotational torque in a variety of applications including diamond coring, deep directional drilling, vertical and horizontal wells.

Superdrill offers additional benefits like improved production and reduced wear of cutting surfaces, down-hole equipment and wet-ends. It also helps prevent corrosion.

Application

Epiroc Superdrill Liquid is highly concentrated, mixes easily and instantaneously and is not generally affected by adverse water quality such as high salt, high pH and extremely high levels calcium and magnesium.

Superdrill deposits a protective film over metal surfaces, which, in turn, reduces frictional drag in extreme pressure environments including both metal to metal and metal to formation friction points. When used correctly Superdrill reduces the coefficient of friction by reducing the thickness of the filter cake and is effective where there is a high risk of differential sticking, such as in highly deviated sections and sections with high differential pressure.

Superdrill will not cause any appreciable adverse changes in mud properties and is proven to improve drilling productivity through benefits like improved cutting action at the bit face and reamer and through to the

Epiroc Superdrill Liquid

protection of the down-hole equipment. Dosage rates can be increased to improve drilling efficiencies in extremely hard abrasive formations, in deep direction holes or when shale and clays are encountered.

Superdrill utilises a biodegradable vegetable oil base and therefore has minimal impact on the environment, aquatic systems and wildlife, and can be used safely in all drilling operations and environmentally sensitive locations.

Superdrill can be added directly into the rod line or slowly and consistently via a venturi mixer or through high speed agitation. Superdrill is normally added to a system at 0,25–0,5 percent by volume, increased to 0,5–1,0 percent by volume in extremely hard, abrasive or highly deviated deep directional holes.

Typical properties

- Appearance: Clear, golden brown to amber liquid.
- Specific gravity (water=1): 0,9–0,95.
- Solubility: Water miscible.

Advantages

- Rapidly dispersible, highly miscible.
- Compatible with most water based muds.
- Improves penetration (ROP) and depth capacity.
- Enhances the cooling action of the circulating fluid.
- Protects against corrosion.
- Eliminates rod vibration, minimises bit balling.
- Does not contribute to core staining.
- Stable in a range of waters types.
- Effective in a wide range of drilling applications.
- Reduces the potential of differential sticking.
- Improves rod, bit and reamer life.
- Environmentally acceptable and non-hazardous.

Several factors will dictate the most appropriate concentration rate.

Please contact your nearest Epiroc representative for optimum results.

Recommended usage/dosage rate to a water based drilling fluid

litres/ 1000 l	% by volume	quart/ 100 gallon
2,5–1,0	0,25–1,0	1,0–4,0

Superfoam Liquid

Foaming agent and detergent

Epiroc Superfoam is a biodegradable mixture of anionic surfactants which has been formulated for use in the mineral and water well drilling industries.

Application

Epiroc Superfoam may be used in a variety of air drilling operations, ranging from simple air drilling to stiff foam drilling where the foam is extended by the use of polymers such as Claystab Liquid or Supermix Powder.

Recommended treatment – mist drilling

Epiroc Superfoam should be mixed with water at 0,25–0,5 percent by volume and injected into the air stream. The rate of injection will depend on hole size, compressor output and water flow rate etc.

Recommended treatment – foam drilling

If water flow rates are high and compressor limits are reached, up to 1,0–2,0 by volume of Epiroc Superfoam.

Recommended treatment – air drilling

Epiroc Superfoam can be used as an effective dust suppressant, at 0,1–0,2 percent by volume injection water.

Stiff foam drilling

Stiff foam applications include areas of severe lost circulation, large diameter holes and unconsolidated formations. Stiff foam can be prepared by injecting a base slurry of 35–45 seconds per litre viscosity fluid prepared as follows: mix Epiroc Superfoam at the ratio 10–15 L/m³ and combine with either of Claystab Liquid 1–2 kg/m³ or Supermix Powder 2–4 kg/m³. When injected into the air stream, this slurry will produce stiff foam of shaving cream consistency.

Advantages

- Environmentally friendly and biodegradable.
- Generates instant high foam quality of exceptional stability.

- Economical, produces stable foam at low concentrations.
- Is compatible with all types of make-up water including brackish, salty and hard water.
- Reduces erosion when drilling poorly consolidated formations.
- Reduces air requirements and allows deeper drilling.
- Reduces the tendency of softer clays to stick together.
- Improves hole cleaning and increase penetration rates.
- Effective in suppressing dust.

Several factors will dictate the most appropriate concentration rate. Please contact your nearest Epiroc representative for optimum results.

Epiroc Superfoam Liquid

Physical properties

- Appearance: Thin liquid, fluorescent yellow.
- pH: 7,5–9,5.

Drilling bits product range

Diamond products

Terracore drilling bits range

Thanks to the Terracore bit range there is always a solution to match the variety of rock conditions encountered. The main focus is on soft to medium hard rock formations – both consolidated and fragmented. There are also tools for drilling in concrete.

Drilling bits and reamings shells

The Terracore bit range offers a wide selection of drilling bits

- Surface set diamond drill bits for soft to medium hard rock
- Poly-crystalline diamond composite (PDC) drill bits for non consolidated medium to hard rock.
- Tungsten carbide (TC) for soft rock formations and overburden drilling.

Special bit tools

- Special bits for non coring drilling, diamond surface set, PDC and Tungsten set drag bits.
- Rod shoes for wireline drill rods.
- Hole opener to ream-up hole to larger to standard hole size.
- Diamond products to convert wireline rods to single tube core barrel.

Casing shoes

- Casing shoe range: diamond impregnated, diamond surface set and tungsten carbide.

*Except non coring and PG/PO bits,
find all our other bits in the core
barrel tables for drill strings on
page 8–54.*

Terracore application classification system based on rock groups 1–10

- Rock characteristics are organized in rock groups 1–10.
- Each number identify a certain rock group.
- Terracore bits are marked with a number or number combination referring to applicable rock group.

Rock group	Formation description	Rock type
1 – 4	Soft to medium hard Very abrasive to slightly abrasive Very fractured to slightly broken	Unmetamorphosed or weakly metamorphosed shales, Sandstone and limestone
5	Medium hard Abrasive Moderately fractured to slightly broken	Limestone and dolomite. Weathered granite and gneiss. Serpentinite and metaperidotite.
6	Medium hard Moderately abrasive Moderately fractured to slightly broken	Unmetamorphosed or weakly metamorphosed diorite, Gabbro, peridotite and gneiss. Basalt, andesite.
7	Medium hard – hard Moderately abrasive Slightly fractured to competent	Metabasalt, amphibolite. Metamorphosed diorite and gabbro. Diabase.
8	Hard Slightly abrasive Competent	Quartz rich skarn. Granite and pegmatite
9	Very hard Slightly abrasive Very competent	Metamorphosed granitic rock and quartz rich gneiss.
10	Extremely hard Non-abrasive, fine grained Very competent	Chert and jasperite. Quartzite. Highly metamorphosed volcanic.

Bits and reaming shells

Impregnated (IMP) bits – PO/PG

Size	Design	Rock formation	Rock Group/Height	Waterways	Product No.

Tungsten carbide
3-wing drag bit

Hole opener

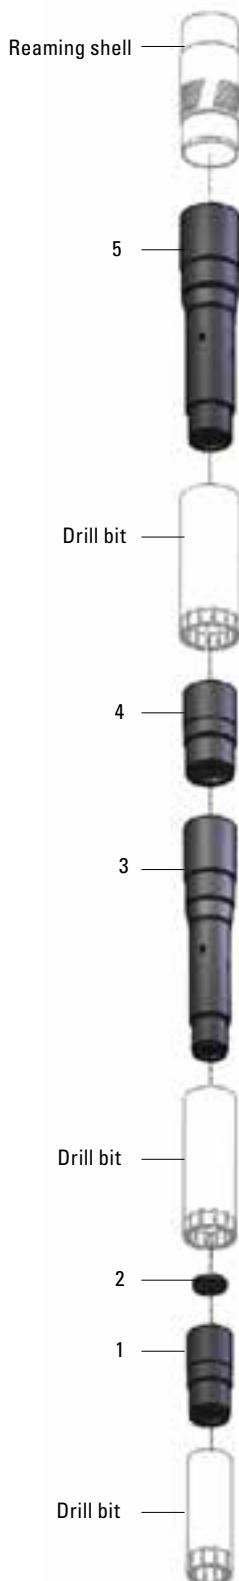

Information

A flexible and economic solution to get a larger hole size with a combination from the catalogue selected standard reaming shells and bits.

Samples of application

1. Not able to reach TD (Total depth) with present hole size, and need to case.
2. Earlier drilled hole needs larger hole size for new investigation.
3. Machine capacity to weak too drill required hole size, reaming a solution.

B	S	60.0	BO/BO	Blank	3702 6557 00
N	S	75.6	NO/NO	Blank	3702 6558 00
N	S	76.0	NO/NO	Diamond surface set	3702 6810 00
H	S	96.1	HO/HO	Diamond surface set	3702 6809 00

C. Core lifter BS. NS. HS

Size	Design	ID (mm)	Product No.
B	S	41.7	3863 7202 00
N	S	51.7	3863 7203 00
H	S	71.6	3863 7212 00

Deep hole "safety" Reaming shell (RES)

Reaming shell with shearer function to recover drill string in case of being stuck.

Size	Design	Setting	Type	Product No.
B	O/V	Diamond surface set	Shear	8424 9147 60
N	O/V	Diamond surface set	Shear	8424 9103 70

Casing shoes

Conversion factors

Length

This unit	Times	Equals
mm (millimetres)	x 0.001	= m
cm (centimetres)	x 0.01	= m
dm (decimetres)	x 0.1	= m
km (kilometres)	x 1000	= m
in (inches)	x 25.4	= m
ft (feet)	x 0.305	= m
yd (yard)	x 0.914	= m
miles	x 1609	= m

Mass (weight)

This unit	Times	Equals
g (grammes)	x 0.001	= kg
t (tonnes, metric)	x 1000	= kg
grains	x 0.0648	= kg
oz (ounce)	x 28.35	= g
lb (pounds)	x 0.4536	= g
tons (long, US)	x 1016	= kg
tons (UK)	x 1016	= kg
tons (short)	x 907	= kg

Power

This unit	Times	Equals
kW (kilowatts)	x 1000	= W
Horsepower, metric	x 735.5	= W
Horsepower, UK	x 745.7	= W
ft.lbf/sec	x 1.36	= W
Btu/h	x 0.29	

Speed

This unit	Times	Equals
km/h (kilometres/hour)	x 0.2777	= m/s
m/s	x 3.6	= km/h
mph (miles/hour)	x 0.45	= m/s
ft/s (foot/second)	x 0.3048	= m/s
ft/s (foot/second)	x 18.29	= ft/min
ft/min (foot/minute)	x 0.3048	= m/min

Volume

This unit	Times	Equals
l (litres)	x 0.001	= m³
ml (millilitres)	x 0.001	= l
dm³ (cubic decimetres)	x 1.0	= l
cm³ (cubic centimetres)	x 1.0	= ml
mm³ (cubic millimetres)	x 0.001	= ml
in³ (cubic inches)	x 16.39	= ml
ft³ (cubic feet)	x 28.316	= l
Imperial gallon	x 4.546	= l
U.S. gallon	x 3.785	= l
Ounces (Imp. fluid liq)	x 28.41	= ml
Ounces (U.S. fluid liq)	x 29.57	= ml
Pints (U.S. liq)	x 0.4732	= l
Quarts (U.S. liq)	x 0.9463	= l
yd³ (cubic yards)	x 0.7646	= m³

Frequency

This unit	Times	Equals
blows/minute	x 0.017	= Hz
khz (kiloHertz)	x 1000	= Hz
r/min (rev./minute)	x 0.1667	= r/s
degrees/second	x 0.1667	= r/min
radians/second	x 0.1592	= r/s
Pressure	x	

Area

This unit	Times	Equals
mm² (square mm)	x 0.000001	= m²
cm² (square cm)	x 0.00001	= m²
in² (square inches)	x 645	= mm²
ft² (square feet)	x 0.929	= m²
yd² (square yards)	x 0.8361	= m²
Acres	x 4047	= m²
Square miles	x 2.590	= km²

Pressure

This unit	Times	Equals
bar	x 100	= kPa
bar	x 100 000	= Pa
kp/cm²	x 0.98	= bar
atm (atmospheres)	x 1.01	= bar
psi (pounds/in²)	x 6.895	= kPa
psi	x 0.06895	= bar

Force

This unit	Times	Equals
kN (kilonewton)	x 1000	= N
kp (kilopond)	x 9.81	= N
kgf (kilogramme force)	x 4.45	= N

Torque

This unit	Times	Equals
kpm (kilopondmetres)	x 9.81	= Nm
lbf in (poundforce/inch)	x 0.11	= Nm
lbf ft (poundforce/foot)	x 1.36	= Nm

United in performance. Inspired by innovation.

Performance unites us, innovation inspires us, and commitment drives us to keep moving forward. Count on Epiroc to deliver the solutions you need to succeed today and the technology to lead tomorrow.
